**KANA SASAKURA, PH.D.**

(PROFESSOR, FACULTY OF LAW, KONAN UNIVERSITY)

**MEDICAL DOCTORS (TBA)**

Recent years have seen a growing number of parents and caretakers accused and convicted of abusing infants by shaking. These accusations and convictions are based on the medical diagnosis of “Shaken Baby Syndrome”.

SBS theory has been challenged in other countries such as U.S., U.K., and Sweden, and many people have been exonerated because of this new medical opinion. However, situations in other countries have not yet been fully introduced in Japan.

We invite medical doctors and lawyers internationally to have a more open debate on this topic!
